Profile

Mechanical engineer (MSc, Sorbonne Université / Arts et Métiers), in charge of the test benches of the MSME laboratory (CNRS): commissioning new equipment, maintenance, troubleshooting and test procedures. Trained in mechanical design (SolidWorks, CATIA), simulation (Abaqus, Python) and experimental work. Looking for a technical V.I.E. in Morocco, the Gulf or the USA.

Skills

Testing	Commissioning and acceptance, verification on certified standards, test plans, ISO test procedures, acceptance criteria, troubleshooting; preventive and corrective maintenance, CMMS.
Hardware	Oscilloscope, multimeter, bench power supply, NI data acquisition, force sensors, Festo servo-drives; calipers, micrometer, torque wrench, soldering iron; Modbus TCP and CAN bus.
Software	NI TestStand, LabVIEW, Python, MATLAB/Simulink, C/C++, Linux; SolidWorks, CATIA; Abaqus, ANSYS; Excel, MS Project.
Languages	French (native), English (C2, TOEIC 953), Spanish (B1).
Aviation	Private pilot licence (PPL) in progress; drone camera operator (short film, 2023).

Experience

2026 – present — **Test & Commissioning Engineer — Experimental Platform**
MSME laboratory (UMR 8208 CNRS), Université Gustave Eiffel, Champs-sur-Marne, France

- In charge of the lab's test benches (acoustic, permeability, thermal, multi-axial mechanical testing): operation, preventive and corrective maintenance, CMMS.
- Commissioned a Hot Disk TPS 1500 thermal analyser at an industrial partner's site: manufacturer acceptance, verification on a certified standard, test plan (repeatability, drift).
- 4-axis biaxial tensile rig: Festo servo-drives over Modbus TCP, NI force measurement, camera synchronization; automated test sequences (Python, LabVIEW, TestStand), safe fallback mode.
- Wrote 4 standardised test procedures (ISO 10534-2, ISO 9053-1, ISO 22007-2), 24 to 50 pages each: methods, acceptance criteria, quality checks, troubleshooting.
- Installation prerequisites for some fifteen instruments (400 V, compressed air, cooling water, fire safety); suppliers in France, Switzerland and the UK (€17k–100k); steering committee.

2024 – 2026 — **Mathematics Teacher**
Lycée-collège privé Maurice Rondeau, Bussy-Saint-Georges, France

- Explaining technical concepts clearly, organising the work, following up each student.

Internships & projects

2024 (6 mo.) — **Mechanical Engineering Intern — MSc thesis**
University of California Santa Barbara (UCSB), USA

- Defined test protocols and validated a numerical model against experimental data; automated data processing in Python and C/C++. Published in the *Journal of Computational Physics* (2026).

2023 – 2024 — **Independent Project — Finite Element Analysis of a Structure**
Paris, France

- Static and dynamic analysis of a loaded beam (Abaqus): bending, stresses, strains; comparison with reference analytical solutions; CAD and post-processing.

2023 – 2024 — **Mechatronics Project — Automated Landing Gear for a Falcon 9-type Rocket**
Top Aéro association, Sorbonne Université / Arts et Métiers

- Designed the retractable legs (SolidWorks) and programmed the control sequence and descent servo-control.

2023 (4 mo.) — **Engineering Intern — Solid Mechanics**
Institut Jean le Rond d'Alembert, Sorbonne Université, Paris

- Built an automated simulation tool in Python, validated on reference cases and compared with Abaqus (dynamics); wrote the validation methodology and technical documentation.

2021 (2 mo.) — **Research Intern — Instrumented Test Bench**
Navier laboratory, École des Ponts ParisTech, France

- Designed and built an instrumented test bench; high-speed camera acquisition and signal processing in Python.

Education

2022 – 2024 — **MSc Mechanical Engineering** — Sorbonne Université & Arts et Métiers (ENSAM), with honours

2021 – 2022 — **BSc Theoretical Physics (L3)** — École Normale Supérieure (ENS), Paris

2018 – 2021 — **BSc Physics & Chemistry** — Université Gustave Eiffel, highest honours, ranked first
